

Name: Hoy Wu

Process Overview

The project began by building gravity and collision detection, allowing a circle character to navigate a space. The core "Anxiety" theme was then integrated, where climbing higher triggers visual stress effects—shifting the color palette from calm blue to panic purple and making the screen shake violently with words that would become more aggressive the more anxiety you have. To balance this tension, collectible items (chamomile tea) to calm the anxiety emotion and a fall damage mechanic to create real stakes for missing a jump. We expanded the world using a vertical camera system and randomized level generation to ensure a unique tower every time. Finally, the experience was polished with a start screen, a victory portal, and exponential math to make the rising anxiety feel intense and impactful.

Process Evidence

GenAI Documentation

Date Used: January 27, 2026

Tool Disclosure: Gemini 3

Purpose of Use: I thought AI could do a better job and be more time efficient in coding my vision.

Summary of Interaction: The tool contributed in writing the code for the project and generating summaries of my project.

Human Decision Point(s): I had a vision for the game and the emotions I want, so I told the AI what I wanted. For example I wanted the emotion of anxiety, for there to be the purple color and for progressive increase of the emotion in the game. I also asked for a progressive text in the background to symbolize anxiety emotions even more and all the instruction/victory/death screens too.

Integrity & Verification Note: Re-reading the assignment instructions, the work seemed fitting of the instructions. In fact, the only flaw would be that I went way beyond the scope of the assignment and added too much to the project.

Scope of GenAI Use: I used AI to generate all the changes to my code and for some parts of the description. In the documents such as readme.

Limitations or Misfires: It did perfectly fine.
